

B::react

A diagram showing a call to the `B::react` function. A gray rectangular box on the left contains the text `B::react`. A blue arrow points from this box to a larger white rectangular box on the right. This larger box contains a C++ code snippet that defines a statechart using Boost libraries.

```
boost::statechart::  
simple_state< B, A,  
    mpl::list< sc::shallow  
_history< J >, sc::deep  
_history< N > >, sc::has  
_full_history >::discard_event
```
